

Washing baskets

We protect your components!

Cleaning sensitive components is playing an increasingly important role.

Here the focus is on a damage-free handling of the components within the production and during the cleaning process.

Steel causes marks on the components and will not resist the chemical attack over time due to the chemistry used in the cleaning process.

Plastics become brittle and break due to thermal Cycling, in combination with the use of cleaning agents.

All of these leads to increasing reject rates, high costs, new production and supply shortages.

With our surfaces

- **M-Line ultra⁺ PA** (biocompatible surface) and
- **ETFE ultra⁺** (FDA-conformal)

we can offer solutions that protect your components against damages, and can withstand the chemical and thermal stress during the cleaning Process, without losing their properties.

Anti-adhesive properties of the surface, sterilisability, shock and impact resistance complete unique properties of our surfaces.

If you should have ever caused a minor damage to the surface due to improper handling, repairing of the defective spot is highly likely feasible.

Our surfaces ensure your trouble-free production process.

We look forward to your inquiries.
